

# Dropbox

for android

This application allows you to access your Dropbox on the go, search your files, send them to your friends, and even take photos and videos that sync instantly online and across computers!

## Viewing Files

Now you can view files that are in your Dropbox right on your Android device. Need to review a slide deck but don't have your computer with you? Dropbox has you covered. Want to read a report that someone at work just shared with you? No problem. Want to listen to music or watch videos that are stored in your Dropbox? That works too.

dropbox

## Sharing Files

Sharing files with people from the Android application couldn't be simpler. Email a link to the file or share it using any Android application on your device, including text messaging.

## Photo/Video Uploads

Launch your phone's built-in camera while running Dropbox and your photos and videos will upload to your Dropbox instantly. When you use this feature together with Dropbox shared folders, these files are synced to your friends' and family's computers instantly!

## Android Flexibility

Open the files in your Dropbox using any of the thousands of available applications from the Android Market, view movies and audio with Android's media player, or edit a document with the built-in text editor. With the Dropbox Android application, all of Android's many features work seamlessly with the syncing, backup, and sharing power of Dropbox.
